

#16

REPORT OF TAR AND NICOTINE CONTENT OF  
THE SMOKE OF 119 VARIETIES OF CIGARETTES  
NOVEMBER 19, 1969

The Federal Trade Commission's laboratory has determined the tar (dry particulate matter) and total alkaloid (reported as nicotine) content of 119 varieties of cigarettes. The laboratory utilized the Cambridge filter method with the following specifications as set forth in the Commission's announcement of July 31, 1967:

1. Smoke cigarettes to a 23 mm. butt length, or to the length of the filter and overwrap plus 3mm. if in excess of 23 mm.,
2. Base results on a test of 100 cigarettes per brand, or type,
3. Cigarettes to be tested will be selected on a random basis, as opposed to "weight selection",
4. Determine particulate matter on a "dry" basis employing the gas chromatography method published by C. H. Sloan and B. J. Sublett in Tobacco Science 9, page 70, 1965, as modified by F. J. Schultz' and A. W. Spears' report published in Tobacco Vol. 162, No. 24, page 32, dated June 17, 1966, to determine the moisture content,
5. Determine and report the "tar" content after subtracting moisture and alkaloids (as nicotine) from particulate matter.

Concerning the 119 varieties tested, 31 were capable of being smoked to 23 mm. or to an average range of between 23 and 24 mm. The butt lengths of the other 88 varieties tested ranged from 23 mm. to an average of between 34.0 and 38.0 mm. The butt lengths of 25 of the 119 varieties tested exceeded 30 mm.

The samples used were obtained by attempting to purchase two packages of each variety of cigarettes during July of 1969 in each of 50 geographic locations throughout the country. All varieties of cigarettes were not available in each of the 50 geographic locations and in these instances, one or more

additional packages of cigarettes were purchased in those geographic locations where the respective varieties were available. The samples utilized in the tests were representative of the 119 varieties of cigarettes as available throughout the country at the time of purchase.

In the interest of scientific accuracy the tar content is reported to the nearest 1/10 milligram and the nicotine to the nearest 1/100 milligram, each with appropriate statistical values, in the table in which varieties are listed in alphabetical order. In the two tables which respectively list varieties in increasing order of tar values and in increasing order of nicotine values, and in two lists tabulating the current and three previous tests, the average weight and butt length columns have been eliminated; types of cigarettes are more clearly described; tar figures have been rounded off to whole numbers and nicotine figures to tenths of milligrams; and figures representing the standard deviation of the mean have been eliminated. Accordingly, tar and nicotine figures in these tables and lists represent rounded off averages without indication of their precision.

"Tar" and Nicotine Content of One-hundred-nineteen (119) Varieties of Domestic Cigarettes
